;    0162  1      !
;    0163  1      !       This routine is called from the CLI module. It sets the specified
;    0164  1      !       QA flag to the requested value (within limits).
;    0165  1      !
;    0166  1      ! CALLER(S):
;    0167  1      !
;    0168  1      !       CLI
;    0169  1      !
;    0170  1      ! FORMAL PARAMETERS:
;    0171  1      !
;    0172  1      !       R2 - Points to the CLI data table base.
;    0173  1      !
;    0174  1      ! IMPLICIT INPUTS:
;    0175  1      !
;    0176  1      !       Cli_Base [CLI$L_FLAGS] - Indicates which flag to change.
;    0177  1      !       Cli_Base [CLI$L_DATA]  - Indicates the new desired value of the flag.
;    0178  1      !
;    0179  1      ! IMPLICIT OUTPUTS:
;    0180  1      !
;    0181  1      !       New value(s) for the QAx variables declared above.
;    0182  1      !
;    0183  1      ! COMPLETION CODES:
;    0184  1      !
;    0185  1      !       0 - Failure, value out of range.
;    0186  1      !       1 - Success.
;    0187  1      !
;    0188  1      ! SIDE EFFECTS:
;    0189  1      !
;    0190  1      !       Changes the value of the specifed flag, iff the value requested is
;    0191  1      !       within range.

;    0034  0      !
;    0035  0      !       This module contains the support routines required to perform QA on diagnostic programs.
;    0036  0      !
;    0037  0      ! AUTHOR:
;    0038  0      !
;    0039  0      !       Jack Stansbury
;    0040  0      !
;    0041  0      ! CREATION DATE:
;    0042  0      !
;    0043  0      !               15-October-1981, Version 6.5-00
;    0044  0      !       00      Put in code for all the support routines plus the following check routines: QA$Normal_Start,
;    0045  0      !               QA$Multiple_Pass, QA$Loop_On_Test, QA$Run_Backwards.
```

```
;    0047  0      ! MODIFIED:
;    0048  0      !
;    0049  0      !       01      Jack Stansbury, 14-December-1981, Version 6.6
;    0050  0      !               Added remaining QA check routines. Split QA.B32 into two different modules: QAMAIN.B32
;    0051  0      !               (this one) and QACHECKS.B32. While this one contains the support routines, the latter contains
;    0052  0      !               the actual check routines.
;    0053  0      !
;    0054  0      !       02      Jack Stansbury, 5-Jan-1982, Version 6.6
;    0055  0      !               Changed the code in QA$Dump to not print R0 and R1 in the register dump. There is no need to
;    0056  0      !               print these since they are not saved by the CALLx instructions.
;    0057  0      !
;    0058  0      !       03      Jack Stansbury, 1-Feb-1982, Version 6.6
;    0059  0      !               Released the three Supervisors to BSDE to find bugs. This includes all the check routine up to
;    0060  0      !               and including the Error Phase One check.
;    0061  0      !
;    0062  0      !       04      Jack Stansbury, 1-Feb-1982, Version 6.6
;    0063  0      !               Changed the headings on the two table printouts to make the table name more distinctive.
;    0064  0      !
;    0065  0      !       05      Jack Stansbury, 11-Feb-1982, Version 6.6X
;    0066  0      !               Changed the DSX$Branch routine so as to make it compatible with Sam Duncan! He wanted R0 saved
;    0067  0      !               across the branch macro code expansion, so I made significant changes to both the branch macros
;    0068  0      !               (in DIAG.*) and to this branch routine. All of that just for Sam!
;    0069  0      !
;    0070  0      !       06      Jack Stansbury, 27-July-1982, Version 6.9
;    0071  0      !               Changed the spelling of the VDS ^C handler variable.
;    0072  0      !
;    0073  0      !       07      Jack Stansbury, 19-Jan-1983, Version 6.10 (?)
;    0074  0      !               Took out all the references to any of the checks above the Run Backwards check. This
;    0075  0      !               includes taking out the previously entered Error Phase One check. It doesn't work
;    0076  0      !               properly with subroutines in diagnostic programs.
;    0077  0      !
;    0078  0      !       08      Bob Bergazzi    May 17, 1983    Version 6.11
;    0079  0      !               Changed the order of searching libraries.
;    0080  0      !--
```

```

;    0404  1
;    0405  1      !++
;    0406  1      ! FUNCTIONAL DESCRIPTION:
;    0407  1      !
;    0408  1      !       This global routine is called by the $DS_Branch macros. It decides if the branch should be taken.
;    0409  1      !       If the QA flag is set, it will call QA$Main, which calls the appropriate check routine. NOTE:
;    0410  1      !       This routine preserves R1 and attempts to preserve R0 when not forcing an error. At most, the low
;    0411  1      !       bit of R0 will be changed.
;    0412  1      !
;    0413  1      ! FORMAL PARAMETERS:
;    0414  1      !
;    0415  1      !       Register_0    : The general register R0.
;    0416  1      !
;    0417  1      !       Branch_Code   : A literal defining what type of branch is being executed by the diagnostic.
;    0418  1      !
;    0419  1      !       Error_Number  : A diagnostic error number.
;    0420  1      !
;    0421  1      !       Branch_Value  : The value that will determine whether or not the branch should actually be taken.
;    0422  1      !
;    0423  1      ! CALLER(S):
;    0424  1      !
;    0425  1      !       The diagnostic program.

;    1456  1      ! FUNCTIONAL DESCRIPTION:
;    1457  1      !
;    1458  1      !       Find the user's last call frame by following the linked list
;    1459  1      !       of call frames. Find the first call frame whose saved PC is
;    1460  1      !       less than the starting location of the Supervisor. This should
;    1461  1      !       insure that that call frame was put on the stack when the user
;    1462  1      !       called a Supervisor service routine. This called frame will
;    1463  1      !       contain the saved PC, AP, FP, PSW, perhaps some of the general
;    1464  1      !       registers, and (indirectly) the SP.
;    1465  1      !
;    1466  1      ! CALLER:
;    1467  1      !
;    1468  1      !       QA$Dump - to find the call frame so it can print the debugging
;    1469  1      !                 information.
;    1470  1      !
;    1471  1      ! FORMAL PARAMETERS:
;    1472  1      !
;    1473  1      !       Frame_Start - will contain the starting location of the
;    1474  1      !                     found call frame.
;    1475  1      !

0000    48 ;               R. RIGGS        1-OCT-78        VERSION 3 (ESSAA-5.00)
0000    49 ;       03      INCLUDED QIO DATABASE INITIALIZATION ROUTINES
0000    50 ;               M.Howgate       26-Jun-79       Version 4 (ESSAA-5.01)
0000    51 ;       04      Add support for 11/750
0000    52 ;               Roger Riggs     03-NOV-1979
0000    53 ;       05      Added code to load drivers if not found in
0000    54 ;               IOC$GL_DPTLIST
0000    55 ;       06      Added fudge to generate 2 vectors for LPA11K
0000    56 ;               Roger Riggs, 5-Feb-1980, Version 5.2
0000    57 ;       07      Revamped setup of ACF block, Added code to maintain reference
```

```
                     58 ;              count in DPT headers, added code to handle headers on drivers
                     59 ;              header contains the number of vectors for unibus  devices
                     60 ;              Removes need for fudge in edit 06.
                     61 ;--
                     62 ;
                     63 ;       08     John Ciukaj     5-May-80        Version 5.4
                     64 ;
                     65 ;                Added Dummy return for QIO related calls
                     66 ;
                     67 ;              Dave Butenhof   18-jun-1980,    version 5.5
                     68 ;       09     Remove all dummy returns from this module, and move to
                     69 ;              new module VMSDUMMY.
                     70 ;              Roger Riggs, 10-Aug-1980
                     71 ;       10     Use QIO driver prefix from controller instead of device
                     72 ;              this allows for terminals to be connected to more than
                     73 ;              one type of Async controller.  The first prefix
                     74 ;              encountered while linking back through the P-tables is
                     75 ;              used.
                     76 ;
                     77 ;       11     - Jack Stansbury, 22-Oct-1981, Version 6.-
                     78 ;              Fixed truncation errors. Also added .LIBRARY statements
                     79 ;              for $DS and $DIAG. Also changed .PSECT SEP to WORK, CODE,
                     80 ;              and DATA where appropriate.
                     81 ;
                     82 ;       12     - Jack Stansbury, 12-Nov-1981, Version 6.-
                     83 ;              Changed the HALTD to HALT.
                     84 ;
                     85 ;       13     Marion Baggett, 9-Apr-1982, Version 6.7
                     86 ;              Added .NoShow Conditionals after .IDENT statement.
                     87 ;
                     88 ;       14     Jack Stansbury, July 1, 1982, Version 6.8
                     89 ;              Added the 'real' Exe$PwrTimChk routine.
                     90 ;
                     91 ;       15     Marion Baggett, 24-Sept-1982, Version 6.9
                     92 ;              Changed the CASE instruction since WRITEVBLK and READVBLK
                     93 ;              are to far away and a JMP was need.
                     94 ;
                     95 ;       16     Richard E. Muse, 9 January, 1984, Version 6.14
                     96 ;              Added $PRDEF macro definition - VMS Version 4 change.
                     97 ;
                     98 ;       17     Domenic Andella, 9-Apr-1984, Version 6.14
                     99 ;              Added code in FILL_ACF to handle case where
                    100 ;              an SBIA is attached, and it is necessary to
                    101 ;              'backtrack' another level.
                    102 ;
                    103 ;       18     Bob Bergazzi    24-Apr-1984     Version 7.0
                    104 ;                             - Changed FILL_ACF to set up R3 with the CSR
                    105 ;                               address for the subsequent call to FIND_ADP.
                    106 ;                             - Changed FIND_ADP routine to compare ADP$L_CSR
                    107 ;                               instead of ADP$W_TR. This accomodates the VENUS
                    108 ;                               cpu with multiple SBIs.
                    109 ;                             - Changed INI_DRADP to add 100 or 300 to SCB_BASE
                    110 ;                               depending on which SBI the adapter is connected to.
                    111 ;                             - Removed UBINT... code from INI_UBADP since it
                    112 ;                               only needs the size of that code (UBINTSZ), which
                    113 ;                               is defined in ONLY8600.
                    114 ;
```

0259    670          .SBTTL  QIO$ADDUNIT     Add a unit to the QIO database
0259    671 ;++
0259    672 ; FUNCTIONAL DESCRIPTION:
0259    673 ;
0259    674 ;       This routine takes all the necessary steps to
0259    675 ;       insert a unit into the QIO database, including adding
0259    676 ;       ADP's, CRB's, IDB's, DDB's and UCB's.
0259    677 ;       The generic name of the device is used to locate the
0259    678 ;       device driver for the device.  Starting with the specified
0259    679 ;       device fields are copied from the P-table to the ACF block
0259    680 ;       which contains all the information necessary to build the
0259    681 ;       QIO database.  For unknown devices the unit and vector information
0259    682 ;       is copied. For a TM03 the unit is copied to only one of two fields.
0259    683 ;       For channels, (DR780, RH780 & DW780) the configuration register is set
0259    684 ;       and the ACF is complete. For all non-channel devices this process
0259    685 ;       is repeated for the link device, and then for it's link device...etc.
0259    686 ;       Note that it is impossible to catch the case where the TM03 is
0259    687 ;       omitted from the link chain for a magtape drive... i.e. no
0259    688 ;       error is reported.  Errors are reported if the channel is omitted.

Assembler run totals           2313     00:00:08.47    00:00:14.37

The working set limit was 3400 pages.
348441 bytes (681 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1693 non-local and 119 local symbols.
1786 source lines were read in Pass 1, producing 126 object records in Pass 2.
69 pages of virtual memory were used to define 60 macros.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	25	00:00:00.01	00:00:00.19
Command processing	927	00:00:00.24	00:00:00.94
Pass 1	725	00:00:02.99	00:00:04.18
Symbol table sort	0	00:00:00.33	00:00:00.33
Pass 2	65	00:00:00.86	00:00:01.59
Symbol table output	2	00:00:00.03	00:00:00.10
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.04	00:00:00.03
Assembler run totals	1752	00:00:04.51	00:00:07.37

The working set limit was 2400 pages.
166703 bytes (326 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1171 non-local and 26 local symbols.
743 source lines were read in Pass 1, producing 76 object records in Pass 2.
21 pages of virtual memory were used to define 20 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	6
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	3
SYS$COMMON:[SYSLIB]STARLET.MLB;2	7
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	16

1437 GETS were required to define 16 macros.

There were no errors, warnings or information messages.

Symbol table output	2	00:00:00.05	00:00:00.29
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	4	00:00:00.06	00:00:00.13
Assembler run totals	1856	00:00:04.89	00:00:08.44

The working set limit was 2900 pages.
220656 bytes (431 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1072 non-local and 26 local symbols.
595 source lines were read in Pass 1, producing 72 object records in Pass 2.
37 pages of virtual memory were used to define 36 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	2
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	11
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0

Cross-reference output	2	00:00:00.01	00:00:00.01
Assembler run totals	1482	00:00:02.26	00:00:05.26

The working set limit was 1900 pages.
82358 bytes (161 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 317 non-local and 23 local symbols.
272 source lines were read in Pass 1, producing 30 object records in Pass 2.
18 pages of virtual memory were used to define 17 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	8
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0

;    0053  0      !
;    0054  0      !       This module emulates RMS (read-only functions) for the
;    0055  0      !       Supervisor.  It additionally supports RT-11 format files
;    0056  0      !       on console floppy.
;    0057  0      !

;    0062  0      !
;    0063  0      !               Dave Butenhof, 02-oct-1980, Version 6.1
;    0064  0      !       1       Eliminate possiblility of accessing console storage device
;    0065  0      !               as "CS:" by explicitly checking for controller and unit.
;    0066  0      !       2       Make "last-chance" backup filespec global as "DEF$Q_BACKSTOP"
;    0067  0      !       3       <DEBUG> to make user mode debug easier, conditionalize MFPR
;    0068  0      !               to execute only in standalone.
;    0069  0      !       4       Add TS11 rpb setup to RMS$OPEN.
;    0070  0      !               Dave Butenhof, 9-apr-1981, Version 6.3
;    0071  0      !       05      Fix up some context problems in RMS base routines.  Namely,
;    0072  0      !               Return EOF if VBN = eofvbn and ffb = 0 ($READ).  Also,
;    0073  0      !               start RSZ and RBF as 0!!!
;    0074  0      !               - Dave butenhof, 02-Jun-1981, version 6.4
;    0075  0      !       06      Alter directory spec on libraries, use logical names $DS,
;    0076  0      !               $DIAG for flexibility.
;    0077  0      !               - Dave Butenhof, 24-Jun-1981, version 6.4                                [07]
;    0078  0      !       07      Setup RPB for console device, to allow using the console                 [07]
;    0079  0      !               BOOTDRIVR routines.  Also, start cleaning up some of the                 [07]
;    0080  0      !               Macro JSB routine linkages to use Bliss V2.1's register output           [07]
;    0081  0      !               parameter capability, instead of global registers.
;    0082  0      !       08      - Dave Butenhof, 31-aug-1981, version 6.5
;    0083  0      !               Support DQ device (IDC) for Nebula, as ODS disk
;    0084  0      !
;    0085  0      !       09      - Dave Butenhof, 26-Oct-1981, version 6.-
;    0086  0      !               Alter call to LOC$PTABLE to use new argument, link address
;    0087  0      !
;    0088  0      !       10      - Dave Butenhof, 25-Jan-1982, version 6.6
;    0089  0      !               Fix calls to Exe$AloNonPaged to use output arguments instead
;    0090  0      !               of global registers.  Also, add new routines to allocate and
;    0091  0      !               init pseudo RPB, and to deallocate same.  Generally clean up
;    0092  0      !               RMS$OPEN somewhat.
;    0093  0      !
;    0094  0      !       11      - Dave Butenhof, 05-Mar-1982, version 6.6
;    0095  0      !               Fix edit 10...can't have size field of data structure be
;    0096  0      !               direct output parameter of AloNonPaged, since pointer hasn't
;    0097  0      !               been set yet!
;    0098  0      !
;    0099  0      !       [12]    Dave Butenhof, 15-Apr-1982, version 6.7                                  !G:20
;    0100  0      !               Add support for UDA-50 disks (DUan)                                      !G:20
;    0101  0      !       [13]    Dave Butenhof, 24-May-1982, version 6.8                                  !G:20
;    0102  0      !               Generalize checking for device support with DS$GA_SUPPORT_TABLE          !G:20
;    0103  0      !               data structure and DSX$CHECK_SUPPORT routine.  This is only for          !G:20
;    0104  0      !               VDS file services, and does not/should not reflect all devices.          !G:20
;    0105  0      !
;    0106  0      !       14      Bob Bergazzi    7-Aug-1982      version 6.9
;    0107  0      !               Edit 13 had a typo - RL211 in device support table would not
;    0108  0      !               allow file services for an RL02 connected to an RL11.
;    0109  0      !
;    0110  0      !       15      M. Baggett      1-Dec-1982      version 6.10
;    0111  0      !               Added support for TU80 magtape as load device.
;    0112  0      !
;    0113  0      !       16      M. Baggett      7-Dec-1982      version 6.10
;    0114  0      !               Added support for TU81 magtape as load device.
```

```
;    0115  0      !
;    0116  0      !       17      M. Baggett      23-Feb-1983     Version 6.11
;    0117  0      !               Added support for RC25 booting and file operations.
;    0118  0      !
;    0119  0      !       18      M. Baggett      1-March-1983    Version 6.11
;    0120  0      !               Added LESI,RCF25 and support for booting CI-HSC50.
;    0121  0      !
;    0122  0      !       19      M. Baggett      17-May-1983     Version 6.11
;    0123  0      !               Added changes to support CI-HSC50 port station #.
;    0124  0      !       20      M. Baggett      22-Sep-1983     Version 6.13
;    0125  0      !               Changed name LESI to RC11
;    0126  0      !
;    0127  0      !       21      M. Baggett      11-Oct-1983     Version 6.13
;    0128  0      !               Added support for CI-HSC50 tape and TS05
;    0129  0      !
;    0130  0      !       22      Domenic Andella 1-Mar-1984      Version 6.13
;    0131  0      !               Added code in routines DSX$CHECK_SUPPORT and
;    0132  0      !               RMS$OPEN for 8600 CPU. Each routine uses code
;    0133  0      !               to 'backtrack' through ptables till _LINK field
;    0134  0      !               equals zero, when this occurs the present Ptable
;    0135  0      !               is linked to HUB. Not so for a VENUS, when ptable
;    0136  0      !               _LINK field equals zero it means were linked to
;    0137  0      !               to an SBIA since the HUB is ABUS.  Therfore the
;    0138  0      !               modifications have to do with saving and reloading
;    0139  0      !               the previous adapter and controller address if running on a VENUS.
;    0140  0      !
;    0141  0      !       23      Bob Bergazzi    April 13, 1984  Version 7.0
;    0142  0      !               Changed DSX$Check_support to support ODS format on
;    0143  0      !               the console storage device for the ZZZ cpu.
;    0144  0      !
;    0145  0      !       24      M. Baggett      28-aug-1984     Version 7.1
;    0146  0      !               Changed controller for RC25/RCF25 from RC11 to LESI
;    0147  0      !               so devices could be accessed.
;    0148  0      !
;    0149  0      !       25      M. Baggett      5-Oct-1984      Version 7.1
;    0150  0      !               Change TAPE in support_table to allow operaton on HSC50 tape.
;    0151  0      !
;    0152  0      !       26      Bob Bergazzi    Oct. 18,1984    Version 7.1
;    0153  0      !               Added recognition of DWBUA in the DSX$CHECK_SUPPORT routine.
;    0154  0      !
;    0155  0      !       27      M. Baggett      18-Oct-1984     Version 7.1
;    0156  0      !               Add changes for HSC50 port for magtape operation.
;    0157  0      !
;    0158  0      !       28      M. BAGGETT      2-NOV-1984      VERSION 7.1
;    0159  0      !               Support TK50.  Change TU81 to have init flag.
;    0160  0      !               Change order of clearing init flag for all applicable
;    0161  0      !               devices so a CLI command will only clear it once per command.
;    0162  0      !

;    1198  1
;    1199  1      !++
;    1200  1      ! Functional Description:
;    1201  1      !       Search for the file designated by the FAB filename field (with
;    1202  1      !       appropriate defaults added).  If file is found, set fields in
;    1203  1      !       FAB, NAM and XAB blocks to values retrieved from the file header
;    1204  1      !       or other media areas.
;    1205  1      !
;    1206  1      ! Inputs:
;    1207  1      !       fabptr          Address of the FAB block to control access to
;    1208  1      !                       this file.
;    1209  1      !
;    1210  1      ! Implicit inputs:
;    1211  1      !       fab$l_nam       points to the NAM block associated with this FAB.
;    1212  1      !       fab$l_xab       points to the XAB chain associated with this FAB.
;    1213  1      !       several other pointers with the FAB, NAM and XAB blocks which
;    1214  1      !       determine the type of file manipulations, what values are to be
;    1215  1      !       returned, etc.
;    1216  1      !
;    1217  1      ! Outputs:
;    1218  1      !       R0              status code
;    1219  1      !
;    1220  1      ! Implicit Outputs:
;    1221  1      !       many fields in the FAB, NAM and XAB are set to describe the file
;    1222  1      !       just opened.
;    1223  1      !
;    1224  1      ! Side Effects:
;    1225  1      !       Dynamic pool space is allocated and initialized.  This includes
;    1226  1      !       a copy of the file header, and several blocks for file caching.
;    1227  1      !
;    1228  1      ! Return codes:

                                0000     72 ;          15      Changes to have only 1 SCB instead of 1 per machine
                                0000     73 ;                  Space for SCB is allocated in kernel, initialization
                                0000     74 ;                  is done here.  SCB_IMAGE is reduced to only 1 page.
                                0000     75 ;                  Roger Riggs     6-NOV-1979
                                0000     76 ;          16      Made SETIPL change mode to KERNEL before setting the IPL
                                0000     77 ;                  Roger Riggs, 26-Jan-1980, Version 5.2
                                0000     78 ;          17      Set supervisor vector for software IPL interrupts on
                                0000     79 ;                  levels 6,9,10,11, to dispatch to EXE$FORKDSPTH
                                0000     80 ;                  John Ciukaj, 5-feb-80.    Version 5.2
                                0000     81 ;          18      Delete 'MOVAB   IS(R3),(R2)' causing exception while
                                0000     82 ;                  running diagnostic ECKAX, Exception depended on value
                                0000     83 ;                  of R2 on entry to DS$INITSCB
                                0000     84 ;                  Roger Riggs, 21-Mar-1980
                                0000     85 ;          19      Added EXE$GL_SCB to hold address of current SCB.
                                0000     86 ;                  Roger Riggs, 18-SEP-1980, Version 6.0
                                0000     87 ;          20      Added code to DS$INITSCB to restart the clock
                                0000     88 ;                  Dave Butenhof, 18-feb-1981, version 6.3
                                0000     89 ;          21      Also allow SETVEC w/out changing address
                                0000     90 ;          22      Fix several truncation errors
                                0000     91 ;
                                0000     92 ;          23      - Jack Stansbury, 22-Oct-1981, Version 6.5
                                0000     93 ;                  Fixed several truncation errors. Changed SEP Psects to
                                0000     94 ;                  what they should be. Added .LIBRARY statements for
                                0000     95 ;                  $DS and $DIAG.
                                0000     96 ;
                                0000     97 ;          24      Jack Stansbury, 15-September-1982, Version 6.9
                                0000     98 ;                  Added code in the SetVec routine that will take care of a race
                                0000     99 ;                  condition with the interval clock interrupts and an MTPR
                                0000    100 ;                  instruction that turns off the clock. Also changed the ICCS$M_ERR
                                0000    101 ;                  to be bit 15, instead of bit 31.
                                0000    102 ;
                                0000    103 ;          25      Jack Stansbury, 16-September-1982, Version 6.9
                                0000    104 ;                  Changed the ICCS$M_Err bit back to 31. The VAX Hardware Handbook
                                0000    105 ;                  has a picture of the ICCS longword in the back of the book. This
                                0000    106 ;                  picture states that the ERR bit is bit 15. However, in other
                                0000    107 ;                  sections of the book (and in the SRM), the ERR bit is 15. The
                                0000    108 ;                  NEBULA hardware thinks it is 15 also.
                                0000    109 ;
                                0000    110 ;          26      Bob Bergazzi    21-Oct-1982     version 6.9
                                0000    111 ;                  Changed comments in DSX$SETVEC routine. Also see CLOCK.MAR [25]
                                0000    112 ;
                                0000    113 ;          27      Bob Bergazzi    April 26, 1983  Version 6.11
                                0000    114 ;                  Added call to ONLY_SCB in DSX$INITSCB which fixes the SCB for VENUS.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	27	00:00:00.03	00:00:00.19
Command processing	913	00:00:00.28	00:00:00.80
Pass 1	597	00:00:01.63	00:00:03.29
Symbol table sort	0	00:00:00.13	00:00:00.13
Pass 2	30	00:00:00.47	00:00:01.16
Symbol table output	2	00:00:00.04	00:00:00.13
Psect synopsis output	2	00:00:00.01	00:00:00.15
Cross-reference output	5	00:00:00.17	00:00:00.29
Assembler run totals	1578	00:00:02.76	00:00:06.14

The working set limit was 2400 pages.
84505 bytes (166 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 454 non-local and 33 local symbols.
733 source lines were read in Pass 1, producing 55 object records in Pass 2.
22 pages of virtual memory were used to define 19 macros.

                        0000     60 ;               Dave Butenhof, 10-sep-1980, Version 6.0
                        0000     61 ;       06      Fix user mode RMS GETLINE code to perform case translation
```

```
                        0000     63 ;       07      - Jack Stansbury, 22-Oct-1981, Version 6.5
                        0000     64 ;               Fixed truncation errors. Also added .LIBRARY statements for
                        0000     65 ;               $DS and $DIAG.
                        0000     66 ;
                        0000     67 ;       08      - Dave Butenhof, 12-Nov-1981, version 6.5
                        0000     68 ;               Implement SET VERIFY/CLEAR VERIFY function.  When cleared,
                        0000     69 ;               this flag will cause command script input not to be echoed.
                        0000     70 ;               This is basically for the System Functional Test (EVXBB).
                        0000     71 ;                                                                    ;G:9
                        0000     72 ;       09      - Dave Butenhof, 17-Nov-1981, version 6.5
                        0000     73 ;               Implement type code bytes for all prompts.  The type code
                        0000     74 ;               will not be used in comparison of script file prompts,
                        0000     75 ;               but will be typed out to console or log file, if BINARY
                        0000     76 ;               flag is set.
                        0000     77 ;
                        0000     78 ;       10      -Jack Stansbury, 18-Dec-1981, Version 6.6
                        0000     79 ;               Added a little code in SCRIPT$FLUSH that will clear out the
                        0000     80 ;               QA bit in the DSA flags. This is to insure that QA gets turned
                        0000     81 ;               off when a Control-C interrupts a diagnostic in a script file,
                        0000     82 ;               and a non-continuable command (i.e., one that causes the script
                        0000     83 ;               file to be flushed) is issued. Before, if a START command was
                        0000     84 ;               issued, and a Control-C was typed, and a subsequent START
                        0000     85 ;               command was typed, the second one could be screwed up.
                        0000     86 ;
                        0000     87 ;       11      -Jack Stansbury, 26-Feb-1982, Version 6.6
                        0000     88 ;               Added comments to the DS_GETLINE routine to aid in
                        0000     89 ;               deciphering it.
                        0000     90 ;
                        0000     91 ;       12      - Jack Stansbury, 18-Mar-1982, Version 6.7
                        0000     92 ;               Took out any reference to the TypMsg routine. This is so
                        0000     93 ;               that type-coding can be added. Also added some new DS macros
                        0000     94 ;               that should make this more understandable.
                        0000     95 ;
                        0000     96 ;       13      Marion Baggett, 31-Mar-1982, Version 6.7
                        0000     97 ;               Added SYS$LIBRARY:LIB/
                        0000     98 ;
                        0000     99 ;       14      Marion Baggett, 8-Apr-1982, Version 6.7
                        0000    100 ;               Added type coding.
                        0000    101 ;
                        0000    102 ;       15      Jack Stansbury, 12-Apr-1982, Version 6.7
                        0000    103 ;               Added support for the Customer Runnable Diagnostics package.
                        0000    104 ;
                        0000    105 ;       16      John Ciukaj,    4-Apr-1983,     version 6.11
                        0000    106 ;               - Redefined reference to CRD bits in DSA Flags to
                        0000    107 ;                 distinguish between online and offline
                        0000    108 ;
                        0000    109 ;       17      Peter Green,    20-Jul-1983,    version 6.12
                        0000    110 ;               Added code to support scripting where prompts are
                        0000    111 ;               printed to the terminal and an answer is given by
                        0000    112 ;               the user. This is only done when the script prompt
                        0000    113 ;               ends with "\\".
                        0000    114 ;
                        0000    115 ;       18      M. Baggett      25-Jan-1984     Version 6.14
                        0000    116 ;               Changed dynamic allocation of XAB, FAB, RAB to static form
                        0000    117 ;               so script files will work.
                        0000    118 ;
                        0000    119 ;       19      M. Baggett      8-Feb_1985      Version 8.1
```

```
0000    120 ;               Changed COPY_IT to not change apha characters to uppers
0000    121 ;               case if ULTRIX.
0000    122 ;
0000    123 ;       20      Ted Salem       March 22, 1985  Version 8.2
0000    124 ;               Added interlock code to DS_GETLINE.
0000    125 ;
0000    126 ;       21      M. Baggett      20-June-1985    Version 8.3
0000    127 ;               Change some ULTRIX names.
0000    128 ;
0000    129 ;       22      Amy Iorio       10-July-1985    Version 8.3
0000    130 ;               Put ASK> prompt in for $DSASKxxx macros.
0000    131 ;
0000    132 ;       23      Domenic Andella 25-Sept-1985    Version 9.0
0000    133 ;               Fixed two truncation errors, BSBW's to JSB's
0000    134 ;                                                                       ;G:5
0000    135 ;       24      I. Martin       23-June-1986    Version 10.2            ;G:5
0000    136 ;               Changed literal to symbolic string.                     ;G:3
0000    137 ;                                                                       ;G:7
0000    138 ;       25      Bob Bergazzi    9-Oct-1986      Version 10.4            ;G:7
0000    139 ;               Fixed previous edit.                                    ;G:7
0000    140 ;                                                                       ;G:8
0000    141 ;       26      Ingrid Martin   1-Apr-1987      Version 10.8            ;G:9
0000    142 ;               RRR updates (do like nautilus).                         ;G:8
0000    143 ;                                                                       ;G:9
0000    144 ;       27      Bob Bergazzi    15-apr-1987     Version 10.8            ;G:9
0000    145 ;               Removed extra JSB to CLK$RE_INIT because it is already called ;G:9
0000    146 ;               once in the preceding $DS_CLRVEC on the timer vector.  No     ;G:9
0000    147 ;               symptom observed.                                       ;G:9

Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	5	00:00:00.26	00:00:00.44
Assembler run totals	1840	00:00:05.23	00:00:10.64

The working set limit was 3400 pages.
204019 bytes (399 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1060 non-local and 60 local symbols.
1189 source lines were read in Pass 1, producing 80 object records in Pass 2.
74 pages of virtual memory were used to define 56 macros.

Macro library statistics

Macro library name	Macros defined

                                0000     75 ;                    before calling it.
                                0000     76 ;            13      Changes reflected by new structure of basic loop.
                                0000     77 ;                    i.e. START and RESTART commands call test program directly
                                0000     78 ;                    Roger Riggs             23-OCT-1978     VERSION 07 (ESSAA-5.01)
                                0000     79 ;            14      Changes to VRSTART to support new QIO initialization.
                                0000     80 ;            15      Added code to verify that this program is compatible with
                                0000     81 ;                    this supervisor, via ENV$V_SUPER, Value must match
                                0000     82 ;                    ENV$_SUPER, in DIAG. Updated when supervisor interface
                                0000     83 ;                    changes REQUIRE diagnostic changes.
                                0000     84 ;                    Roger Riggs     4-Sept-1979
                                0000     85 ;            17      Removed check of APT flag during start command
                                0000     86 ;                    Roger Riggs, 14-Feb-1980, Vervsion 5.2
                                0000     87 ;            18      Changed so program will not be started if QIO initialization
                                0000     88 ;                    fails, QIO has already printed the error message.
                                0000     89 ;                    Roger Riggs, 12-Mar-1980, Version 5.3
                                0000     90 ;            19      In VRABORT or DSX$ABORT change mode back to kernel before
                                0000     91 ;                    doing cleanup but after the abort message is printed
                                0000     92 ;                    Roger Riggs, 5-Jun-1980, Version 5.4
                                0000     93 ;
                                0000     94 ;            20      Added code to change mode and stack back to kernel
                                0000     95 ;                    before calling cleanup as a result of start.
```

```
                                0000     97 ;        21      - dave butenhof, 09-Sep-1981, version 6.-
                                0000     98 ;                It is desirable, under APT, and if program error had
                                0000     99 ;                occured, to have ABORT leave machine state intact, for
                                0000    100 ;                purposes of isolating error.  Add special code to skip
                                0000    101 ;                INIT_CONTEXT and CLEANUP calls if in APT mode and error
                                0000    102 ;                flag set.
                                0000    103 ;
                                0000    104 ;        22      - Marion Baggett 80-oct-1981 Version 6.-
                                0000    105 ;                Added new entry point to support command SHOW SUPPORT
                                0000    106 ;
                                0000    107 ;        23      - Jack Stansbury, 21-Oct-1981, Version 6.-
                                0000    108 ;                Added calls to QA$MAIN for the QA enhancement.
                                0000    109 ;                Also added .LIBRARY statements for $DS and $DIAG.
                                0000    110 ;
                                0000    111 ;        24      - Jack Stansbury, 22-Oct-1981, Version 6.-
                                0000    112 ;                Fixed truncation errors.
                                0000    113 ;
                                0000    114 ;        25      - Jack Stansbury, 26-Oct-1981, Version 6.-
                                0000    115 ;                Changed most of the error messages to mixed case
                                0000    116 ;                (as per government affirmative action regulations)!
                                0000    117 ;
                                0000    118 ;        26      - Dave Butenhof, 19-Nov-1981, version 6.-
                                0000    119 ;                Add type codes to printouts
                                0000    120 ;
                                0000    121 ;        27      - Jack Stansbury, 16-Nov-1981, Version 6.5
                                0000    122 ;                Added the VRSHOWSECTIONS routine.
                                0000    123 ;
                                0000    124 ;        28      - Jack Stansbury, 21-Nov-1981, Version 6.5
                                0000    125 ;                Commented out three of the calls to QA_MAIN because it
                                0000    126 ;                appears they will not be needed for the 6.5 DS version.
                                0000    127 ;
                                0000    128 ;        29      - Jack Stansbury, 5-Jan-1982, Version 6.6
                                0000    129 ;                Added comments to the START routine in preparation for the
                                0000    130 ;                version 30 changes. Also took out the commented-out calls
                                0000    131 ;                to QA_MAIN since I will not be needing them.
                                0000    132 ;
                                0000    133 ;        30      - Jack Stansbury, 6-Jan-1982, Version 6.6
                                0000    134 ;                Added code and moved other code around in the START routine so
                                0000    135 ;                as to facilitate the "QA Start Loop".
                                0000    136 ;
                                0000    137 ;        31      - Jack Stansbury, 15-Jan-1982, Version 6.6
                                0000    138 ;                Changed the FMT_PROG header line so that it would print the
                                0000    139 ;                number of tests on the first line. Only the time appears on the
                                0000    140 ;                second line. This is in keeping with the EndPass message and
                                0000    141 ;                the End-Of-Looping message (in EndSub).
                                0000    142 ;
                                0000    143 ;        32      - Jack Stansbury, 20-Jan-1982, Version 6.6
                                0000    144 ;                Added code to not print the header line if the QA Loop on
                                0000    145 ;                Subtest check was executing and if a flag bit had been cleared.
                                0000    146 ;                This prevents the header line from being output once for every
                                0000    147 ;                subtest in the diagnostic when the Loop on Subtest check
                                0000    148 ;                routine is executing.
                                0000    149 ;
                                0000    150 ;        33      Marion Baggett, 9-Apr-1982, Version 6.7
                                0000    151 ;                Added .NoShow Conditionals after .IDENT , ordered .LIBRARY
                                0000    152 ;                statements. Change DS$PRINTF statement to use type codes
                                0000    153 ;
```

```
0000    154 ;       34      Richard Brown, 30-June-82, Version 6.8
0000    155 ;               Addition of call to MAP_DEBUGGER so repeated STARTs will
0000    156 ;               not wipe out the debugger once it has been loaded.
0000    157 ;               Also, addition of loading debugger before diagnostic is
0000    158 ;               started, if proper flag is set.
0000    159 ;
0000    160 ;       35      Marion Baggett, 24-Sept-82  Version 6.9
0000    161 ;               Fixed truncation error.
0000    162 ;
0000    163 ;       36      Bob Bergazzi    2-Nov-1982      Version 6.9
0000    164 ;               Changed VRSTART so that if we are loaded under APT do not
0000    165 ;               check the DSA$V_LOAD_DEBUGGER flag. APT sets this flag for
0000    166 ;               reasons long since lost. When running under APT, every
0000    167 ;               START would cause the supervisor to try and load the debugger
0000    168 ;               from the console device and cause APT to timeout.
0000    169 ;
0000    170 ;       37      Jack Stansbury, 8-Mar-1983, Version 6.11
0000    171 ;               Changed the abort routines to make sure they print the true
0000    172 ;               (if there is one) user PC.
0000    173 ;
0000    174 ;       38      John Ciukaj     3-May-1983      Version 6.11
0000    175 ;               - Alter Start routine so that an error does not occur
0000    176 ;                 when an ambiguous section name is found AND the section name
0000    177 ;                 is equivalent to the name entered.
0000    178 ;
0000    179 ;       39      Bob Bergazzi    May 16, 1983    Version 6.11
0000    180 ;               Changed the order of the .LIB statements.
0000    181 ;
0000    182 ;       40      Bob Bergazzi    Sep 21, 1983    Version 6.13
0000    183 ;               Added BIN_TIME quadword in PSECT WORK for START/TIME switch.
0000    184 ;               Just before call to DISPATCH, do a $SETIMR if /TIME was given.
0000    185 ;               Commented out for version 6.13 and 6.14, and 7.0
0000    186 ;
0000    187 ;       41      Bob Bergazzi    Jan. 26, 1984   Version 6.14
0000    188 ;               Fixed ABORT so it won't print out VMS system addresses as the
0000    189 ;               user PC.
0000    190 ;
0000    191 ;       42      Ted Salem       Aug. 3, 1984    Version 7.10
0000    192 ;               Added SHOW TESTS command.
0000    193 ;
0000    194 ;       43      Bob Bergazzi    Feb. 26, 1985   Version 8.1
0000    195 ;               Fixed edit [40] (/TIME).
0000    196 ;
0000    197 ;       44      Bob Bergazzi    Mar. 4, 1985    Version 8.1
0000    198 ;               Commented out edit 43.
0000    199 ;
0000    200 ;       45      Amy Iorio       June 17, 1985   Version 8.3
0000    201 ;               clear externals for Printrev
0000    202 ;
0000    203 ;       46      Ted Salem       Oct. 15, 1985   Version 9.0
0000    204 ;               Do above (#45) properly by clearing
0000    205 ;               entire date structure.
0000    206 ;
0000    207 ;       47      J. Baranski     1-Nov-1985      Version 9.1
0000    208 ;               Un Comment Out START/TIME.
0000    209 ;
0000    210 ;       48      M. Baggett      14-Jan-1986     Version 9.1
```

```
0000    211 ;                   Stop truncating long device name when starting program
0000    212 ;                                                                          ;G:2
0000    213 ;       49          Domenic Andella 7-Feb-86        Version 10.0           ;G:2
0000    214 ;                   For every start or run sequence in an mp system, the   ;G:2
0000    215 ;                   primary processor should clear its own interlocking    ;G:2
0000    216 ;                   data structures, therefore add jsb to MP$_CLEAR_LOCKS  ;G:2
0000    217 ;                   in routine VRSTART. In addition, clear MP$GR_BOOTED_PROCESSORS, ;G:2
0000    218 ;                   MP$GR_IDLING_PROCESSORS, MP$GL_FLAGS, and MP$GL_CONDITION_FLAGS. ;G:
0000    219 ;                                                                          ;G:2
0000    220 ;       50          M. Baggett      26-Mar-1986     Version 10             ;G:5
0000    221 ;                   Separate device names in list printed after starting test ;G:5
0000    222 ;                   with tabs.                                             ;G:5
0000    223 ;                                                                          ;G:5
0000    224 ;       51          M. Baggett      31-Mar-1986     Version 10             ;G:6
0000    225 ;                   Fixed so diagnostics run offline.                      ;G:6
0000    226 ;                                                                          ;G:6
0000    227 ;       52          Bob Bergazzi    16-May-1986     Version 10.1           ;G:7
0000    228 ;                   Added /TIME changes.                                   ;G:7
0000    229 ;                                                                          ;G:8
0000    230 ;       53          Bob Bergazzi    28-May-1986     Version 10.1           ;G:8
0000    231 ;                   Changed running under VMS from elapsed time to execution ;G:8
0000    232 ;                   time.                                                  ;G:8
0000    233 ;                                                                          ;G:9
0000    234 ;       54          Bob Bergazzi    9-Jun-1986      Version 10.2           ;G:9
0000    235 ;                   Changed typecode on /TIME abort to DS$K_TYPE_PROGRAM_END. ;G:9
0000    236 ;                   It turns out that VSDP uses these typecodes.           ;G:9
0000    237 ;                                                                          ;G:10

Cross-reference output	6	00:00:00.31	00:00:00.50
Assembler run totals	1866	00:00:04.85	00:00:09.21

```
The working set limit was 2900 pages.
202868 bytes (397 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 643 non-local and 58 local symbols.
1110 source lines were read in Pass 1, producing 64 object records in Pass 2.
47 pages of virtual memory were used to define 31 macros.
```

Assembler run totals	2062	00:00:04.52	00:00:07.79

```
The working set limit was 2900 pages.
164186 bytes (321 pages) of virtual memory were used to buffer the intermediate code.
There were 80 pages of symbol table space allocated to hold 1365 non-local and 41 local symbols.
795 source lines were read in Pass 1, producing 87 object records in Pass 2.
19 pages of virtual memory were used to define 18 macros.
```

0000    30 ; ABSTRACT:
0000    31 ;       This module contains the bootstrap device driver for
0000    32 ;       MASSBUS TM03 based magtapes (TE16,TU77,TU45)
0000    33 ;
0000    34 ; ENVIRONMENT:  kernel mode
0000    35 ;
0000    36 ; AUTHOR:  Roger Riggs, CREATION DATE:  4-Sep-1980
0000    37 ;
0000    38 ;--
0000    39 ; Modified:
0000    40 ;
0000    41 ;                   Roger Riggs, 22-oct-1980, Version 6.1
0000    42 ;       01          Added code to support IO$_DRVCLR.
0000    43 ;       02          changed RET's to RSB for version 4 interface of Bootdrivr

Assembler run totals	1571	00:00:03.57	00:00:06.21

The working set limit was 2900 pages.
136960 bytes (268 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1236 non-local and 12 local symbols.
389 source lines were read in Pass 1, producing 79 object records in Pass 2.
18 pages of virtual memory were used to define 17 macros.

                        ; Functional description:
                        ;
                        ;       This routine performs basic magnetic tape positioning.
                        ;       functions are supported for read, rewind, skip files (forward
                        ;       backward) and skip records (forward and backward). It also
                        ;       support drive clear.  Drive clear must be called before the first
                        ;       tape operation as it is necessary to initialize the tape subsystem
                        ;       prior to the first position or transfer operation.
                        ;       Drive clear initialization clears the Need Buffer Address (NBA)
                        ;       bit in the drive. This bit can be reset by a UNIBUS reset/init
                        ;       which in the TS11 causes the tape to be rewound. If NBA is set
                        ;       the function is rejected with tape position lost.
                        ;

```
The working set limit was 2400 pages.
149901 bytes (293 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1303 non-local and 17 local symbols.
606 source lines were read in Pass 1, producing 85 object records in Pass 2.
19 pages of virtual memory were used to define 18 macros.
```

;    0828  1      !
;    0829  1      ! Addresses stored in inodes are capable of addressing fragments
;    0830  1      ! of several blocks. File system blocks of at most size MAXBSIZE can
;    0831  1      ! be optionally broken i to 2, 4, or 8 pieces, each of which is
;    0832  1      ! addressible; these pieces may be DEV_BSIZE, or some multiple of
;    0833  1      ! a DEV_BSIZE unit.
;    0834  1      !
;    0835  1      ! Large files consist of exclusively large data blocks.  To avoid
;    0836  1      ! undue wasted disk space, the last data block of a small file may be
;    0837  1      ! allocated as only as many fragments of a large block as are
;    0838  1      ! necessary.  The file system format retains only a single pointer
;    0839  1      ! to such a fragment, which is a piece of a single large block that
;    0840  1      ! has been divided.  The size of such a fragment is determinable from
;    0841  1      ! information in the inode.  This field  is filled in when the disk
;    0842  1      ! is created.
;    0843  1      !
;    0844  1      ! The file system shows file size at the fragment level;
;    0845  1      ! to determine number of blocks, aligned fragments are examined.
;    0846  1      !
;    0847  1      ! The root inode is the root of the file system.
;    0848  1      ! Inode 0 can't be used for normal purposes and
;    0849  1      ! historically bad blocks were linked to inode 1,
;    0850  1      ! thus the root inode is 2. (inode 1 is no longer used for
;    0851  1      ! this purpose, however numerous dump tapes make this
;    0852  1      ! assumption, so we are stuck with it).

;    0976  1        !
;    0977  1        ! Look at each inode in directory
;    0978  1        !
;    0979  1        ! A directory consists of some number of blocks of DIRBLKSIZ(currently 255)
;    0980  1        ! bytes, where DIRBLKSIZ is chosen such that it can be transferred
;    0981  1        ! to disk in a single atomic operation (e.g. 512 bytes on most machines).
;    0982  1        !
;    0983  1        ! Each DIRBLKSIZ byte block contains some number of directory entry
;    0984  1        ! structures, which are of variable length.  Each directory entry has
;    0985  1        ! a struct direct at the front of it, containing its inode number,
;    0986  1        ! the length of the entry, and the length of the name contained in
;    0987  1        ! the entry.  These are followed by the name padded to a 4 byte boundary
;    0988  1        ! with null bytes.  All names are guaranteed null terminated.
;    0989  1        ! The maximum length of a name in a directory is MAXNAMLEN.
;    0990  1        !
;    0991  1        !  All DIRBLKSIZ bytes
;    0992  1        ! in a directory block are claimed by the directory entries.  This
;    0993  1        ! usually results in the last entry in a directory having a large
;    0994  1        ! direct$w_d_reclen.   If the first entry of  a directory block is free,
;    0995  1        !  then its direct$l_d_ino is set to 0.  Entries other than the first
;    0996  1        ! in a directory do not normally have direct$l_d_ino set to 0.

The working set limit was 2400 pages.
46032 bytes (90 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 439 non-local and 17 local symbols.
241 source lines were read in Pass 1, producing 40 object records in Pass 2.
9 pages of virtual memory were used to define 8 macros.

0000    31 ; FACILITY : Diagnostic Supervisor
0000    32 ;
0000    33 ; ABSTRACT:
0000    34 ;        This module includes dummies of VMS routines which are either
0000    35 ; unnecessary in the Supervisor, or exist only in drastically reduced form,
0000    36 ; and do not fit within any other Supervisor module.

                        .Sbttl  MUTEX Control Routines

;++
; FUNCTIONAL DESCRIPTION:
;       Lock and unlock MUTEX database.  Since the Supervisor does not
; implement multi-programming, a "MUTEX"-type lock is implemented via
; disabling AST delivery.
;
; CALLING SEQUENCE:
;       SCH$LOCKW -
;                JSB     SCH$LOCKW
;       SCH$UNLOCK -
;                JSB     SCH$UNLOCK
;
; INPUT PARAMETERS:
;       Ignored.  In Supervisor implmentation, which MUTEX is targeted for
; lock or unlock is irrelevant, since no data is accessed.
;
; IMPLICIT INPUTS:
;       none
;
; OUTPUT PARAMETERS:
;       none
;
; IMPLICIT OUTPUTS:
;       none
;
; COMPLETION CODES:
;       SS$_NORMAL
;
; SIDE EFFECTS:
;       SCH$LOCKW results in AST delivery for the current mode to be
;       disabled.  SCH$UNLOCK results in AST delivery being re-enabled.
;--

The working set limit was 2400 pages.
40786 bytes (80 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 421 non-local and 1 local symbols.
165 source lines were read in Pass 1, producing 36 object records in Pass 2.
8 pages of virtual memory were used to define 7 macros.
